

Pathogenesis of Neurodegenerative Diseases

finding a common ground

April 1-5 2019
Braga
Portugal

3rd edition

Although clinically heterogenous, neurodegenerative disorders share basic cellular mechanisms of pathology (e.g. inflammation, protein aggregation, metabolic and oxidative stress). This course will provide a clinical, mechanistic and therapeutic integration of common mechanisms across different neurodegenerative pathologies such as Alzheimer's and Parkinson's diseases, polyglutamine disorders, multiple sclerosis and neuropathic pain. Basic and clinical researchers will dynamically interact with audience providing the current progress in neurodegenerative field in a discussion-based course.
